**DETAILED ACTION**

***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Examiner's Amendment***

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Please change the following:

**In the claim:**

In claim 27, line 14, change “in each case” to –the stator legs are facing the respective rotor rings—

An examiner's amendment to the record appears above. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

***Allowable Subject Matter***

**Claims 27-52** are allowed.

***Reason for Allowability***

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the limitations of a unipolar transverse flux machine, comprising: a housing; a rotor rotatable about a rotor axis, said rotor having at least one rotor module assembled from two coaxial ferromagnetic rotor rings toothed with a constant tooth pitch and one permanent-magnet ring fastened between

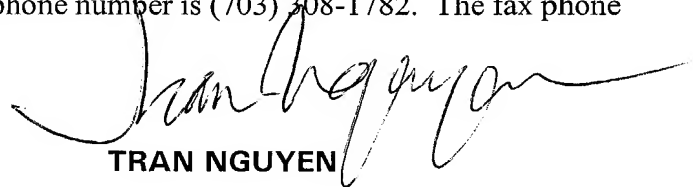

said rotor rings and magnetized unipolarly in a direction of said rotor axis; a stator which is concentric with said rotor axis and having at least one stator module associated with said rotor module and including an annular coil disposed coaxially to said rotor axis and U-shaped stator yokes fitting over said annular coil and fixed with a pitch corresponding to a tooth pitch of said housing, said rotor rings having a toothing provided solely on an outer circumference of said rotor rings remote from said rotor axis, said stator yokes in said stator module being disposed such that one leg of each of said stator yokes is located facing one of said rotor ring and another leg of each of said stator yokes is located facing another of said rotor rings, the stator legs are facing the respective rotor rings with a radial gap spacing; ***and one short-circuit element each disposed between successive ones of said stator yokes in a direction of rotation of said rotor and emending axially over both said rotor rings and facing said rotor rings with a radial gap spacing.***

Comparing to the prior-art of the record, none of the prior art references of the record, either stand-alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
